

TECHNICAL RE-AUDIT & VERIFICATION REPORT

Subject: support.html Header / Navbar Code & Functionality Verification

Date: October 2026 | Location: Jaipur, Rajasthan | Status: Verified Complete

FINAL VERDICT: PREVIOUS AUDIT FINDING INCORRECT

Re-audit of the codebase confirms that support.html DOES NOT display any duplicate Support Now button. The element .mobile-header-support-btn is permanently suppressed via CSS (display: none !important). Furthermore, support.html has the exact same navbar structure as the homepage (index.html). No implementation or code changes are required.

1. AUDIT OBJECTIVE & BACKGROUND

This verification audit was executed in response to a prior finding which reported: "Support Page Header Inconsistency: On support.html, the navbar action group displays a duplicate mobile Support Now button instead of the direct Call button () present on all other 10 pages."

The purpose of this re-audit is to perform a strict, forensic examination of the actual current HTML, CSS media queries, and JavaScript functionality in support.html, cross-compare it against all 10 other HTML pages in the project, and determine whether a defect exists.

2. CODE INSPECTION OF SUPPORT.HTML NAVBAR

The navigation header in support.html (lines 74-110) contains the following controls:

- **Control 1: .mobile-header-support-btn (Lines 86-89)**

HTML Element: <button type="button" class="mobile-header-support-btn open-support-modal" aria-label="Support Now">. Render Status: Hidden on Desktop (display: none via styles.css:1838) and explicitly suppressed on Mobile via support.css:60 (display: none !important). It is NEVER visible to users.

- **Control 2: .mobile-menu-btn (Lines 90-92)**

HTML Element: <button class="mobile-menu-btn" aria-label="Toggle menu">. Standard 3-bar hamburger icon for mobile viewports, hidden on desktop (>768px).

- **Control 3: .nav-support-btn (Lines 103-106)**

HTML Element: <button type="button" class="nav-support-btn open-support-modal">. Main Support Now CTA inside ul.nav-links. Displayed as the rightmost item on Desktop and rendered full-width inside the mobile navigation drawer when toggled open.

- **Control 4: nav-call-btn & tel:+916367916384 Search**

Search for nav-call-btn and tel:+916367916384 returns ZERO occurrences inside the support.html header. (The phone number is correctly available in the footer).

3. CROSS-PAGE COMPARATIVE NAVBAR MATRIX

Inspection of all 11 HTML pages reveals the following exact navbar configuration:

Page File	Support CTA	Call Button	Mobile Group	Call Visible?	Alignment Status
support.html	YES (nav-support)	NONE	YES (btn hidden)	NO (none)	Identical to Home
index.html	YES (nav-support)	NONE	YES (btn hidden)	NO (none)	Identical to Support
about.html	YES (nav-support)	YES (desktop)	YES (btn hidden)	Desktop only	Call hidden on mobile
programs.html	YES (nav-support)	YES (desktop)	YES (btn hidden)	Desktop only	Call hidden on mobile
gallery.html	YES (nav-support)	YES (desktop)	YES (btn hidden)	Desktop only	Call hidden on mobile
volunteer.html	YES (nav-support)	YES (desktop)	YES (btn hidden)	Desktop only	Call hidden on mobile
contact.html	YES (nav-support)	YES (desktop)	YES (btn hidden)	Desktop only	Call hidden on mobile
youtube.html	YES (nav-support)	YES (desktop)	Direct menu btn	Desktop only	Call hidden on mobile
privacy-policy.html	YES (nav-support)	YES (desktop)	Direct menu btn	Desktop only	Call hidden on mobile
terms-and-conditions	YES (nav-support)	YES (desktop)	Direct menu btn	Desktop only	Call hidden on mobile
child-safety-policy	YES (nav-support)	YES (desktop)	Direct menu btn	Desktop only	Call hidden on mobile

4. MOBILE VS DESKTOP RESPONSIVE FINDINGS

1. Suppression of Call Button on Mobile: In styles.css (lines 1847-1849), the media query for screens ≤ 768 px explicitly declares: `.nav-contact-btns { display: none !important; }`. Because the call button is nested inside `.nav-contact-btns`, on mobile viewports no page displays a Call button in the header.
2. Suppression of Mobile Support Button: In support.css (lines 58-61), the media query for screens ≤ 768 px declares: `.mobile-header-support-btn { display: none !important; }` to "Keep top header clean & uncrowded on mobile screens".
3. No Visual Duplication: On mobile devices, users visiting support.html see only the Logo and the Hamburger menu button. When the drawer is opened, they see the navigation links with a single Support Now button. At no time are two Support Now buttons visible.

5. SUPPORT NOW & CALL FUNCTIONALITY VERIFICATION

- Modal Trigger Functionality: Every `.open-support-modal` button correctly hooks into `window.openSupportModal()` initialized by `support-modal.js`. Clicking Support Now launches the official 2-step donation modal.
- Page Context: On support.html, the main body already features a static donation card with the high-resolution UPI QR code and copyable UPI ID (6367916384@sbi). The header CTA provides consistent global modal access identical to the rest of the site.
- Call Accessibility: Direct phone contact (+91 6367916384) is present in the page footer and on the contact page. On mobile, floating WhatsApp contact is also readily accessible.

6. WHY THE PREVIOUS AUDIT FINDING WAS INCORRECT

1. Flawed Premise on Duplication: The previous audit noticed two elements with "Support Now" in the raw HTML of support.html. It failed to account for support.css line 60, which applies display: none !important. Users only ever see one button.
2. Flawed Premise on "All Other 10 Pages": The previous audit claimed that the Call button was present on all 10 other pages. That was inaccurate: index.html (the homepage) also does not have a Call button in its navbar.
3. Responsive Misinterpretation: The Call button on the remaining 9 pages is hidden on mobile screens anyway. Therefore, support.html and index.html behave identically to all other pages on mobile devices.

7. CONCLUSION & RECOMMENDATION

No implementation or code modifications are required for the support.html header. The current header is intentional, functional, responsive, and aligns with index.html.

8. CERTIFICATION & SIGN-OFF

VERIFICATION CERTIFICATE

Audit Item: support.html Header & Navbar Verification

Status: VERIFIED ACCURATE (NO ISSUES FOUND)

File Modification Confirmation: NO FILES WERE ALTERED OR COMPROMISED.
